

Dear colleague,

We are requesting your help in order to advertise the **Erasmus Mundus SERP+ master** (www.master-serp.eu). We intend to reach students in **chemistry, physical-chemistry and materials science**.

The teaching is delivered in **English** by a consortium of **4 European universities**: University of Paris-Sud (France) - University of Genova (Italy) - University of Porto (Portugal) - Adam Mickiewicz University (Poland).

This **two-year master** aims at training students in areas of great relevance such as: **renewable energies, green chemistry, nanosciences, nanomedicine, innovative materials, applications of radiations**.

We offer a lot of benefits for the students: an innovative **summer school on transferable skills** to develop entrepreneurial skills, **the involvement of non-academic actors**, an international and intersectoral **mobility scheme**, a **six-month internship**, and a **large range of facilities** offered to the students.

About **20 Erasmus Mundus scholarships** (EU students: 32,800€; non EU students: from 41,800€ to 43,800€) and **15 places for self-financed students** are available.

Applications online (www.master-serp.eu) before March 4th, 2017 for the Erasmus Mundus scholarship and June 30th, 2017 for self-financed students.

We thank you in advance for passing on this information to any student who might be interested.

Best regards,

Nicolas Rabasso

Nicolas Rabasso (Associate Professor of Organic Chemistry)

Méthodologie, Synthèse et Molécules Thérapeutiques, Bât 410
